The BJM anchoring system is divided into flat anchorage and curved flat anchorage. It is composed of tension end (BM anchorage,HBM anchorage) and fixed end anchorage (H,Ptype).

Used in post-tensioned prestressed concrete structures and components.

A wide range of options are available, often used in the construction of prestressed plates and negative bending moments.

Features:

The flat anchor is a prestressed anchoring device with a flat structure, presenting a flat appearance overall

It is mainly suitable for prestressed tensioning and anchoring of plate-type and thin-walled concrete components

The core feature is the utilization of a flat design to compress vertical space, ensuring a more uniform stress distribution

FAQ

How long can I expect to get the customized sample?

After you pay the sample charge and send us confirmed files, and the mould is existing in our factory, the samples will be ready in 10-15 working days;

If the mould is not existing, we need to open a new mould, the samples will be ready in 15-18 working days; The samples will be sent to you via express and arrive in 3-5 working days. You can use your own express account number or prepay us if you do not have an account.

What about the lead time for mass production?

Honestly, it largely depends on the order quantity and the season when you place the order. As usual, 20-35 working days will be OK. If you are very urgent, we will try our best to do it.
